

# ICE FORCE

## SPRAY SYSTEM

### BUILD DENSER AND CLEARER ICE FAST

This powerful ice making system is comprised of a high-pressure electric pump, stainless steel booms, speed-related water flow and an atomizer feature with dripless nozzles. The built-in retrofit system guarantees a seamless addition to any ice resurfacer model.

### FEATURES

The Ice Force Spray System is the most significant breakthrough in ice making technology since the invention of the Ice Resurfacer. Many facilities are already benefiting from the system with increased efficiency, lower energy costs and improved ice quality.

The system can be retrofitted on all makes & models of ice resurfacers, improving the old gravity-fed flooding method. Touch screen controls allow the operator to increase, decrease and shut off the water distribution instantly.

The system integrates the spray thickness with the ground speed to produce an even and accurate application. This innovative system allows operators to build ice faster than all traditional methods, while safely seated at the wheel.

### ADVANTAGES

- 1 Advanced ice resurfacing applications
- 2 Substantial savings on labour and energy
- 3 Quick retrofit system
- 4 Precise and accurate water applications
- 5 Ability to flash freeze
