

The De-OX Ice Making system responds to today's challenges in ice maintenance.

De-OX water produces ice that is harder, faster, and more resilient to cuts and ruts.

The oxygen is completely removed from the water, allowing the ice to freeze faster and show paint with greater clarity.

Facilities experience a reduced carbon footprint, lower energy consumption, and decreased labour & refrigeration costs.

De-OX system removes the insulator factor that causes ice dehydration. Facilities can raise their ice temperature 2-3°F while still maintaining a high quality sheet of ice.

Subsidiary of Federal Signal Corporation

The Ice Force Spray System is the most significant breakthrough in ice making technology since the invention of the Ice Resurfer.

Many facilities are already benefiting from the system with increased efficiency, lower energy costs and improved ice quality.

The System can be retrofitted on all makes & models of ice resurfacers, replacing the old gravity-fed flooding method. Touch screen controls allow the operator to increase, decrease and shut off the water distribution instantly.

The system integrates the spray thickness with the ground speed to produce an even and accurate application. This innovative system allows operators to build ice faster than all traditional methods, while safely seated at the wheel.

Recreation facilities require a safe, clean-air, indoor environment for their employees, spectators and skaters. Engo Ice Resurfacers produce zero emissions ensuring facilities are healthy for everyone.

Engo not only exceeds the performance of a fossil fuel machine, but also reduces the facility's overall operational expenses.

Engo Ice Resurfacers have many advanced technical features, including the patented safe hydraulic quick blade change, Auger Washout, Ice Leveling and Auger Boost Systems.

The Minengo Edger was developed for operators that require only the very best results from their ice maintenance equipment.

This silent, user-friendly powerhouse has zero environmental impact while removing ice buildup around the boards.

Features:

- Ergonomic handle
- Battery/hour gauge
- Key start
- Precise cutting depth control
- Easy slide in/out cutters (require no adjusting)
- Heavy duty fully adjustable cutting platform and board guide.
