

CORONAVIRUS (COVID-19) CLEANING AND SANITIZING CAPABILITIES

with Largest Installed Base and Rental Network In North America

Professional cleaning and sanitizing of our cities, states, and communities has never been more critical than today due to the coronavirus pandemic.

Existing Federal Signal equipment and our rental fleet can quickly be mobilized and/or modified, if needed per CDC guidance, to clean and sanitize outdoor surfaces such as sidewalks, streets, bridges, subways and other common public areas where germs can spread. As a strong partner with governments and municipalities, Federal Signal is uniquely positioned to rapidly support.

Vactor®, **TRUVAC®**, **Jetstream®**, and **Elgin®** products are mobile machines that incorporate liquid storage and liquid pumping systems that can safely provide pressurized liquid flows to single or multiple hand-held devices or fixed nozzles for spraying. In addition, on-board hydraulic systems can be tapped to power other tools in brands 1-3 below.

- 1** **VACTOR** products also provide vacuum systems that can collect and convey materials from great distances from the machine. They can store up to 800 feet of large diameter hose allowing them to conduct liquids to remote or hard-to-reach areas like subway or elevated platforms or behind large structures.
- 2** **TRUVAC** products also provide vacuum systems that can collect and convey materials from great distances from the machine. They normally incorporate the ability to heat the liquid to temperatures near 200°F.
- 3** **ELGIN** sweepers often provide vacuum systems that can collect materials. They can pump liquids while the machine is moving at any speed.
- 4** **JETSTREAM** units are normally trailer-mounted and can be towed while pumping liquids on or off-road.

The Coronavirus (COVID-19) pandemic is a fluid and ever changing global challenge. We are committed to the health and safety of our employees, our customers, and our communities. We will all get through this together.
